

## **New Future...New Skills!**

In the midst of the worst teen mental health crisis this world has ever seen, we need to prepare this generation for a future that is largely unknown! Other than we know it will be globalized and machines will do many of the jobs we were prepared for in school.

How do we equip our kids with the skills they will need for this unpredictable future when so many of them are stressed, sick and bored in a school system that was designed for previous generations?

Soft Skills! People Skills! The Human skills that machines will never have!

**\*Critical Thinking \*Communication \*Collaboration \*Creativity \*Empathy**

If we can develop these skills in EVERY classroom in **collaborative, nurturing school environments** that foster **relationship building and leadership** over test scores and rankings, we know our kids will grow and flourish in ways we've never seen before! And they WILL be ready to take on a 21st Century future that needs what makes each and every one of them so uniquely HUMAN!

*“The most important skills they will need for their future that will consist largely of jobs that don’t even exist yet today will be **the ability to work well with others** and **leverage power of machine learning.**”*

**-Ted Dintersmith**
